Date :

Data Visualizations Using Tableau

Aim :

To connect, analyze, visualize, and create interactive dashboards using Tableau for effective business intelligence and data analytics.

Algorithm :

1. Open Tableau Desktop and choose excel file
2. Creating Worksheet
3. Create a bar chart for revenue by product category
4. Create a pie chart for revenue by region
5. Create a line chart for revenue trend
6. Create a KPI for total revenue
7. Create a full dashboard for sales dataset

Output :

The screenshot displays the Tableau Desktop interface. On the left, the 'Connections' pane shows 'tourism_dataset_5000' as the selected data source. Below it, the 'Sheets' pane lists a worksheet named '80a88cf0-35d5-...c-957f-74f2a53'. The main workspace shows a preview of this worksheet, displaying 14 fields and 5000 rows. The preview table includes columns for Tourist ID, Age, and Interests, with data for four rows. A 'Go to Worksheet' button is visible at the bottom left of the preview area.

Tourist ID	Age	Interests
1	48	['Architecture', 'Art', 'History']
2	37	['Cultural', 'Nature']
3	43	['History', 'Art', 'Architecture']
4	46	['Cultural', 'Art', 'Architecture']

Creating Bar Chart :

Comparison of tourism dataset

Creating Pie Chart :

Checking for accessibility

Creating Line Chart : Tourist Rating Trend across Sites

Creating KPI :

The screenshot shows a data visualization tool interface. The main view is a table titled "Sheet 4". The table has three columns: "Site Name", "Percentage", and "Satisfaction". The rows show the following data:

Site Name	Percentage	Satisfaction
Colosseum	5913000.00%	3,490
Eiffel Tower	6101400.00%	3,580
Great Wall of China	6082200.00%	3,570
Machu Picchu	5951200.00%	3,495
Taj Mahal	5979600.00%	3,536

The tool interface includes a "Data" panel on the left with a search bar and a list of tables. The "Marks" panel shows the chart type set to "Automatic". The "Columns" and "Rows" panels show the fields used for the table: "Measure Names" for columns and "Site Name" for rows. The bottom status bar indicates "10 marks 5 rows by 2 columns SUM of Measure Values: 317.945".

Dashboard :

Result :

Thus, Tableau was used successfully to connect datasets, create worksheets, apply filters and parameters, generate visualizations, build dashboards, and create stories for business intelligence and analytical decision-making
